Try the following, let me know if you find anything........

ELEMENTS: Shuttle Keplerian Elements Mailing List

List Title: ELEMENTS: Shuttle Keplerian Elements Mailing List
List Owner or Contact: Gary Morris, elements-request@alsys.com

To subscribe to this list, send e-mail to LISTSERV@alsys.com; in the body
of the message, type SUBSCRIBE ELEMENTS followed by your real name. For
example: SUBSCRIBE ELEMENTS Jane Q. User.

To unsubscribe from this list, send the command UNSUBSCRIBE ELEMENTS in
e-mail to LISTSERV@alsys.com.

Send all other list-related commands to LISTSERV@alsys.com. For
assistance, send the command HELP.

This list is read-only; you are not permitted to post articles to the
list.

This mailing list is "edited"; this means that one or more humans must
approve all articles for publication. When you submit an article, it is
reviewed by a human (or humans) who determine whether or not the article
will be distributed to the list.

This mailing list is "moderated"; that means that one or more human beings
monitors the flow of the list traffic and makes an effort to keep
conversations topical. While virtually all lists have a set number of
topics to which conversations should apply, moderated lists are more

strict in their interpretations of the guidelines. To be a good member of
a moderated list, do not go outside the topics of the list without first
okaying it with the moderator(s).

This mailing list is echoed to the USENET newsgroups, sci.space.news,
rec.radio.info, and rec.radio.amateur.space. You may find that
participating in the list by reading it with the America Online USENET
Newsgroups reader will be a more rewarding experience than participating
over e-mail. To participate over USENET, use keyword NEWSGROUPS to go to
the America Online USENET Newsgroups reader. Then click on the "Expert
Add" button and supply the newsgroup name (sci.space.news, rec.radio.info,
or rec.radio.amateur.space) when asked.

Keywords: space, aerospace, shuttle

Description:
The purpose of the mailing list is to get Shuttle elements out as quickly
as possible during shuttle flights. Only tracking data (elements) are sent
to the list. There are no flight announcements, shuttle information or
discussion on the list, since that information is available from several
other sources. You will receive pre-launch predicted elements and post
launch elements based on either Shuttle computer state vector data or on
NORAD radar tracking data. The data is primarily Two-Line Element Sets,
but also some AMSAT format element sets.

The list language is English.

>appreciate having any you find passed along.

I've never seen any AMSAT newsgroups, I can say with near certainty that
there aren't any. However, there are several mailing lists, KEPS, SAREX,
AMSAT-BB, send mail to listserv@amsat.org for more information.

>I havn't found the one you
>mention for keps up-dateds yet. It would be nice to get really up to the
>minute data for the SAREX missions.

I run a mailing list dedicated to distributing Shuttle Keps. To subscribe

write to "listserv@alsys.com", include at the beginning of your message the
command:

      subscribe elements Your Full Name

To just get information about the list send the info command to the
listserver:

      info elements

You can find a copy of MacSPOC v1.1 (shareware) at,

ftp.demon.co.uk   /pub/ham/mac

or directly from the author Daniel R. Adamo
<adamo@kn5f.jsc.nasa.gov>.

You also find quite a large selection of other Macintosh Ham software
at the DEMON FTP site.

Regards,

Sean.
